

Recommended Adhesives for Arbiton vinyl floors with HD Mineral Core with Click System (Amaron & Woodric Collections)

1. Introduction

This document provides a list of recommended adhesives for Arbiton vinyl floors with HD Mineral Core (Amaron & Woodric collections), which are designed for floating installation using the click system. While adhesives are generally not required as a basic solution for floors with click system, they can provide additional stability in larger rooms or high-traffic areas.

Note: This guidance does not apply to floors with the integrated Aculay acoustic layer.

2. Floating Installation (Click System)

The click system allows easy installation without adhesives. However, in some situations, like humid environments or large spaces, using adhesive can help improve stability.

3. Recommended Adhesives

Adhesive Brand	Product Name	Usage
UZIN	UZIN KE 68	Commercial and residential spaces

4. Application Tips

- Use adhesive in high-traffic areas or larger spaces if extra stability is needed.
- Ensure the subfloor is clean, dry, and level before installation.
- **For wall installations:** The adhesive can also be used to attach vinyl floor to walls. Make sure the wall surface is properly prepared according to the adhesive manufacturer's instructions.
- Always follow the adhesive manufacturer's recommendations for proper application.

5. Warranty

Using adhesive incorrectly may void the product warranty. Please refer to Arbiton's product documentation for specific warranty details.
